- 45-54: 15% / 14%
- 55-64: 10% / 12%
- 65+: 5% / 15%

Note: NC DETECT is North Carolina's statewide syndromic surveillance system. There may be data quality issues affecting our counts: counties with <10 cases may not be true lack of opioid overdose cases but data quality issues; additionally, some hospitals use non-specific poisoning codes rather than specific opioid poisoning codes.

Counts based on ICD-10-CM diagnosis code of an opioid overdose: **T40.0** (Opium), **T40.1** (Heroin), **T40.2** (Other Opioids), **T40.3** (Methadone), and **T40.4** (Other Synthetic Narcotics). We have changed our opioid poisoning definition for county tables posted on our injuryfreenc poisoning data page to include **T40.6** (other and unspecified narcotics), therefore numbers seen on these monthly reports will not match the posted county tables.
