Durham County

OPIOID OVERDOSE EMERGENCY DEPARTMENT VISITS

Opioid Overdose ED Visits by Month: Durham County, 2018 YTD

Year-to-Date Opioid ED Visits in Durham County
versus Jan to Feb 2017

Opioid Overdose ED Visits by Age Group

Opioid Overdose ED Visits by Race

Durham, 2018 YTD | North Carolina, 2018 YTD
---|---
White | 38.7% | 85.4%
Black | 51.6% | 9.8%
Other | 9.7% | 3.0%

Note: Counts based on diagnosis (ICD-9/10-CM code) of an opioid overdose of any intent (accidental, intentional, assault, and undetermined) for North Carolina residents. Opioid overdose cases include poisonings with opium, heroin, opioids, methadone, and other synthetic narcotics.

Source: NC DETECT: ED; Syndrome: Overdose: Opioid Overdose (ICD-9/10-CM)

NOTE: The North Carolina Disease Event Tracking and Epidemiologic Collection Tool (NC DETECT) is North Carolina’s statewide syndromic surveillance system. For training on NCDETECT, contact Amy Ising, ising@ad.unc.edu.

Provisional Data: 2018 ED Visits. YTD: Year to Date; Data suppressed for <10 cases; Month(s) shaded in blue are above average YTD.

Emergency department visit data from NC DETECT are provisional and should not be considered final. There may be data quality issues affecting our counts: counties with <10 cases may not be true lack of opioid overdose cases but data quality issues; additionally, some hospitals use non-specific poisoning codes rather than specific opioid poisoning codes.
