The North Carolina Violent Death Reporting System (NC-VDRS) is a CDC-funded statewide surveillance system that collects detailed information on deaths that occur in North Carolina resulting from violence: homicide, suicide, unintentional firearm deaths, legal intervention and deaths for which intent could not be determined. NC-VDRS is a multi-source system that gathers information from death certificates, medical examiner reports and law enforcement reports. The goal of this system is to aid researchers, legislators, and community interest groups in the development of public health prevention strategies to reduce violent deaths. NC-VDRS began collecting data in January 2004. This document summarizes all deaths from violence among North Carolina residents for 2015.

In 2015, 2,062 North Carolina residents died by violence.

There were 1,379 suicides (66.9%), 586 homicides (28.4%), 21 deaths from legal interventions (1.0%), 14 unintentional firearm deaths (0.7%) and 62 deaths of undetermined intent (3.0%) in 2015.

The majority of suicide and homicide victims were male. Males accounted for 76.1 percent of suicide victims and 80.5 percent of homicide victims.

Patterns of suicides and homicides differed by race. Most suicide victims were non-Hispanic (NH) white (89.4%), while 8.0 percent were NH black.

In contrast, 59.7 percent of homicide victims were NH black, and 33.6 percent were NH white.
Suicides and homicides displayed different age patterns.

Homicide rates peaked in the 25 to 34 year age group.

Suicide rates rose steadily from 10 to 54 years of age. Suicide rates peaked among those ages 85 and older.

The majority of homicides (73.6%) and suicides (56.1%) were committed using firearms.

The second most common method of homicide was other method, such as fire/burns, unarmed assault, or blunt traumas (12.6%).

The second and third most common methods of suicide were hanging (21.2%) and poisoning (16.9%).

*Other includes fire/burns, unarmed assault, blunt trauma, falls, and other methods of death.
